Our Services

- Chemical Cleaning
- Chromate Plating
- Anodizing
- Pickling & Passivation
- On-site Passivation Process
- Electro Nickel Plating

Chemical Cleaning

For Aluminum and Stainless-Steel materials

Removes residual oil, grease, machining coolant oil, and surface oxides

Chromate Plating

Also known as
Chromate
Conversion Coating
or Alodine Coating

Used to passivate
aluminum
materials

Anodizing

Enhances the surface of metals by creating a corrosion-resistant oxide layer

Can be dyed for aesthetics and sealed for protection

Pickling & Passivation

Removes rust,
grease, oils, and
other foreign
deposits

Brightens the
stainless-steel
surface and ensures
proper passive layer
formation

BEFORE

AFTER

On-site Pickling & Passivation

- ▶ Same process as above, performed directly at the client's location for convenience

iStock™
Credit: ALesik

Electro Nickel Plating

- ▶ Deposits a thin nickel layer for corrosion resistance, improved hardness, and enhanced appearance
- ▶ Process involves immersion in a nickel salt solution with an electric current
